

PLANTING

	Drilled	Broadcast
Seeding Rate	Mono-culture 15lbs/acre In mixes 5-7lbs/acre	Mono-culture 25 lb/acre In mixes 12-16 lb/acre
Planting Depth	1/4th inch	
Ideal Soil	Prefers slightly alkaline loam and silty soils with a pH 6+	

Frosty can be dormant or frost seeded in most locations. Success is dependent on soil type and days experiencing soil heaving.

- No recorded cases of bloat
- Crude protein as high as 22.1%
- Relative feed values up to 182
- Excellent palatability - cows selectively grazed for it!

An annual, multi-cut, non-bloating legume!

- Great companion to alfalfa!
 - Good for increasing first year tonnage in new stand
 - Can overseed existing alfalfa to improve yield and stretch stand additional years
- Low – non bloating legume that works well for hay!
- Exceptional attraction for wildlife!
