

With the Corn Revolution being realized throughout our lineup, we are excited to bring products with extremely strong agronomics forward for our customers. P0487Q is a brand new 104 day product that is a perfect marriage of yield and stability. This AQUAmax product offers a score of 9 on drought tolerance and 6 for roots making it highly suitable for drought prone soils. This go anywhere hybrid boasts a semi flex ear type that allows for top end yield in the right environment. On the disease management side of things, P0487Q sits with moderate response to fungicide for Gray Leaf Spot and a low probability of response for Northern Corn Leaf Blight. As we watch this product grow during the 2021 growing season, we are excited to see how it sits on the yield board!!
