

As excited as we are for our additions to the corn lineup, we are just as excited for our new additions to our Enlist soybean lineup. P26T23E's are a new 2.6 product that boasted over a 3 bushel per acre yield advantage compared to competitor product in 2020 testing. This soybean offers high yield potential and excellent emergence scores that make it a prime candidate for early planting conditions and with a shorter, bushy, plant type it allows for good standability late season. We are excited to monitor this product throughout the rest of this growing season and see how it performs locally in our plot network.

Soybeans:
P26T23E* (E3)

Relative Maturity: 2.6

Positioning For:

SUITABILITY RATINGS

KEY ENVIRONMENTS

Irrigation Suitable

SUITABILITY

Wide Rows: 30 in. or Wider Suitable

SOILS

Highly Productive Soils	Highly Suitable
Poorly Drained Soils	Suitable
Drought-Prone Soils	Suitable
Early Planting/Cool Soils (w/SDS)	Suitable

MANAGEMENT COMMENTS

- Versatile to offensive variety with high yield potential
- Very good field emergence for early planting conditions
- Moderate plant height with a moderately wide canopy for high fertility soils

CHARACTERISTIC SCORES

Plant Height for Maturity	4
Canopy Width	6
Harvest Standability	7
Field Emergence	7
Phytoph. Field Tol.	5
